Cell step controls from saved float32 statistics
Fixed multiplier m = 2
Matched h = −0.25
Matched h ≈ 1/3 (0.01% mismatch)
1e−3
Output-change energy J / h²
Net MSE cost D / h²
Set14
BSD100
Urban100
Upsampling scale s
Bands: all non-DC. Equal image / fixed-seed / model weights within each dataset. Shading: paired image bootstrap 95% CI.
h is per-axis rel_cell change. Cross-scale controls also change LR features, native cell and training support.
